

CLAIMS

1. Web browsing device, for selecting a specific hyperlink from a set of
5 hyperlinks included in a hyper-document, each hyperlink of said set referring to a
web resource, CHARACTERISED IN THAT said web browsing device comprises the
following parts:

a. association holding part (AHP), adapted to hold for said specific
10 hyperlink an association of said specific hyperlink with a corresponding description
and a user direct select action;

b. association presenting part (APP), coupled with an input to an output
of said association holding part (AHP) and adapted to present for each said specific
hyperlink, said corresponding description and said user direct select action;

c. user direct select action detecting part (USADP), adapted to detect the
15 activation of said user direct select action; and

d. hyperlink determination part (HLDP), coupled with an input to an
output of said user direct select action detecting part (USADP) and adapted to
determine said specific hyperlink from said association holding part (AHP) based on
the detection of said activation of said user direct select action.

20

2. Web browsing device according to claim 1, CHARACTERISED IN
THAT said browsing device further comprises an association holding updating part
(AHUP), coupled with an output to an input of said association holding part (AHP)
and adapted to update said association by assigning another specific hyperlink and
25 corresponding description to said user select action.

3. Web browsing device according to claim 1, CHARACTERISED IN
THAT said user direct select action is a predefined keystroke.

4. Web browsing device according to claim 1, CHARACTERISED IN THAT said user direct select action is a predefined spoken word or phrase.

5. Web browsing method, for selecting a specific hyperlink from a set of hyperlinks, included in a hyper-document, each hyperlink of said set referring to a web resource, CHARACTERISED IN THAT said web browsing method comprises the following steps:

- a. holding for said specific hyperlink an association of said specific hyperlink with a corresponding description and a user direct select action;
- 10 b. presenting for each said specific hyperlink, said corresponding description and said user direct select action;
- c. detecting the activation of said user direct select action; and
- d. determining said specific hyperlink from said association holding part based on the detection of said activation of said user direct select action.

15 6. Web browsing method according to claim 5, CHARACTERISED IN THAT said browsing method further comprises the step of updating said association by assigning another specific hyperlink and corresponding description to said user direct select action.

20 7. Web browsing method according to claim 5, CHARACTERISED IN THAT said user direct select action is a predefined keystroke.

25 8. Web browsing device according to claim 5, CHARACTERISED IN THAT said user direct select action is a predefined spoken word or phrase.

9. Software module, for running on a processing system for inclusion in a web browsing device to select a specific hyperlink from a set of hyperlinks, included in a hyper-document, each hyperlink of said set referring to a web resource,

CHARACTERISED IN THAT said software module comprises the following software sub-modules:

- 5 a. association holding sub-module, adapted to hold for said specific hyperlink an association of said specific hyperlink with a corresponding description and a user direct select action;
- b. association presenting sub-module, co-operating with said association holding sub-module and adapted to present for each said specific hyperlink, said corresponding description and said user direct select action;
- 10 c. user direct select action detecting sub-module, adapted to detect the activation of said user direct select action; and
- d. hyperlink determination sub-module, co-operating said user direct select action detecting sub-module and adapted to determine said specific hyperlink from said association holding sub-module based on the detection said activation of said user direct select action.

15

10. Software module according to claim 9, CHARACTERISED IN THAT software module further comprises an association holding updating sub-module, co-operating with said association holding sub-module and adapted to update said association by assigning another specific hyperlink and corresponding description to said user select action.

20

11. Software module according to claim 9, CHARACTERISED IN THAT said user direct select action is a predefined keystroke.

25

12. Software module according to claim 9, CHARACTERISED IN THAT said user direct select action is a predefined spoken word or phrase.
